COROWARE REBRANDS PERSONAL TELEPRESENCE SERVICE AND LAUNCHES COROCALL

CoroCall Expands Service by Offering Telephone Access to Video Conferences

Redmond, WA – November 19, 2009 – CoroWare Technologies, a subsidiary of CoroWare, Inc. (COWI) today announced it has rebranded its Personal Telepresence Service to CoroCall, an easy-to-use, affordable, multi-participant video conferencing solution that adds dial-in audio conferencing to the communications mix.

Until now, video conference meetings required each attendee to be in front of a computer with a high-speed Internet connection, a webcam and either a headset or echo cancellation speaker box. With CoroCall's new voice feature, remote attendees can call into the conference and participate using nothing more than a telephone.

“We have participated in numerous CoroCall-hosted meetings and have been pleased by the usability, interactivity, and quality of the video sessions,” said Ira Weinstein, senior analyst and partner, Wainhouse Research. “The addition of audio dial-in capabilities further expands the reach of this hosted offering by allowing users who aren't able to participate using video to join the meeting.”

By using CoroCall, businesses can streamline their video and audio conferencing tools into a single affordable solution. Audio conferencing features can be used independently or in conjunction with video conferencing.

"CoroCall makes it easy for anyone to attend a video conference by phone when they don't have access to video conferencing systems or desktops," said Lloyd Spencer, CEO of CoroWare. “By integrating video and phone access, customers can easily and affordably attend a CoroCall whether working from the office, from home, or on the road.”

About CoroCall

CoroCall is a high-definition, video conferencing service that allows simultaneous interaction with up to 50 people using commonly available audio/video equipment on a computer with high-speed broadband Internet. Built on the patented, award-winning VidyoConferencing™ software, CoroCall eliminates the typical frustrations associated with video conferencing

There are no contracts to sign, and subscriptions are billed monthly. CoroCall sales associates are available to help customers assess their needs. Custom packages are available for large groups. Members of CoroCall's technical staff will assist with a quick easy set-up to offer free demonstrations prior to ordering.

In addition to video and audio conferencing, CoroCall subscribers have access to add-on services that enable them to capture sessions for broadcasting live streams to web audiences or storing and editing for building video libraries.

For more information on CoroCall, please visit www.corocall.com.

Pricing and Availability

CoroCall video and audio conferencing services are available now in a variety of affordable packages that can meet small and large organizations' requirements.
